#### INVESTMENT MANAGEMENT COMPANY REPORT

Ieguldījumu fonda "CBL Opportunities Funds apakšfonda "CBL Optimal Opportunities Fund – USD" (turpmāk The manager of the sub-fund CBL Optimal Opportunities Fund – USD of the investment fund CBL Opportunities Funds (hereinafter the Fund) is the investment management company CBL Asset Management, registered office Republikas laukums 2a, Riga, LV-1010 (hereinafter the Company). The Company was established on 11 January 2002 under registration number 40003577500 with license number 06.03.07.098/367 for investment management services.

The investment objective of the Fund is to achieve long-term capital appreciation by investing in Share Certificates (Units) of investment funds registered in Latvia or other European Union Member States or into securities equivalent to them. Investments can be made into money market, bond, balanced and equity funds as well as into ETFs and equity securities traded on regulated markets of Member States and OECD Member States without any industry limitations. The share of equity funds in the portfolio may amount to up to 70% of the Fund's assets.

In the reporting period, the Fund's net assets increased by EUR 244,042 or 56.66% and totaled EUR 430,716 at the end of the reporting period. Gross asset value as at 30 June 2021 amounted to EUR 431,421. At the same time, the value of the unit of the Fund increased by EUR 0.65, reaching EUR 10.14. The Fund overall return in 2021 was 6.85% in terms of the euros, while in its base currency (USD) 3.52%.

In the first half of 2021 the global economy continued to recover from the recession caused by the pandemic, but the recovery processes were uneven. The U.S. government's stimulus overcompensated the population for lost income during the pandemic, which, combined with faster removal of restrictions and a smoother vaccination process, helped U.S. GDP exceed pre-virus levels already in the first half of this year. The Eurozone economy, which spent the first half of 2021 mostly under various levels of restrictions, showed much weaker performance and, according to analysts' forecasts, will be able to return to pre-virus levels only next year. However, in Q2, with the progress in vaccination and re-opening, economic recovery has also started in Europe. Given the rapid and simultaneous recovery of demand for goods around the world, since the end of last year Western producers have been forced to balance between a strong increase in demand, a rise in production and transport costs, and a lack of components. The rise in resource prices, which has continued steadily since last spring, not only made the production process more expensive, but also significantly increased inflation rates for consumers. As the US economy returned to its normal pace of life, the effect was also reinforced by the delayed demand for certain categories of goods. That lifted core inflation in the U.S. to its highest level since the early 90s. A number of indicators show that high inflation is likely to be a temporary phenomenon. The lack of employees and increased inflation expectations could slightly delay the process of inflation normalisation in the US; also, the increase in the prices of raw materials is largely behind us, and the impact of opening up the economy on consumer prices will also be temporary. Meanwhile, inflation pressures remain moderate in the eurozone. Rising inflation makes life complicated for central banks, which have become accustomed to living in relatively low inflation conditions over the past decade. The ECB and the FRS continued to pursue a strongly accomodative monetary policy. They have also adjusted their formal inflation targets to cope with higher inflation for longer. At the same time, the acceleration of the economy and inflation hasn't gone completely unnoticed in the FRS. The FRS has started to forecast two rate hikes already in 2023, though its initial commitment was to keep rates unchanged at least until 2024. The economic rationale for printing money in the FRS should end even before raising rates.

With the favorable view regading the economic development, riskier asset classes showed better performance during the first half of the year. Growing confidence in corporate financial results and improvements in profitability forecasts were reflected positively in equity prices. Global stock markets closed the first half of 2021 with a 13.5% rise in euro-hedged terms. There were significant differences among regions. While the value of U.S. and European stock indexes have grown at the same pace year-to-date, emerging markets have lagged significantly. The dollar strengthened against the euro by 3% during the first half of the year. Speculative-grade bonds of developed countries showed a dynamic similar to equities and continued to deliver gains thanks to a drop in risk premiums. During the first half of the year, the performance of the segment exceeded 3% (EUR hedged). Meanwhile, in the first months of 2021, a sharp rise in USD benchmark rates left a significant negative impact on low-risk bonds. This move was reversed in Q2, resulting in higher quality bond segments being able to recover some of their losses and closing the first half with very little losses.

Despite the wide-spread positivity in the global economy, there is no shortage of potential challenges that could affect the performance of financial assets. First, the fight against the virus on a global scale has not yet been finished. The delta variant against which vaccines are less efficient already dominates Asia and Europe and is also beginning to spread in the US. Vaccination rates in developing countries also remain low. Second, given the decreasing need for government support, fiscal policy could become restrictive everywhere next year, especially in the United States. Third, in the second half of the year, increasing focus will be on the FRS and ECB communication on their monetary course over a longer term. Central banks are currently looking "through" the inflation acceleration, however, given the strong performance of the U.S. economy, the FRS will have to start lower its monetary support soon. Risk asset valuations remain relatively expensive in historical terms, hence the factors mentioned previously could increase the volatility of the financial market when entering investors' direct views.

The changes that took place in the Fund during the reporting period are described below. The share of funds invested in bond funds at the end of the year was 63.31% of the Fund's net asset value, which is 2.23 percentage points (pp) less than at the beginning of the year. The share of equity funds has decreased by 3.22 pp to 33.94% of the Fund's net asset value. Cash available for investment constitutes 4.91% of net assets. All existing funds are registered in an EU Member state. The majority (54.30%) is invested in Luxembourg-registered funds alongside with some investment funds registered in Latvia and Ireland.

In the reporting period, the total management costs amounted to EUR 2,198, which did not exceed the maximum amount of 1.70% provided in the Fund's prospectus. The investment management company fee totaled EUR 1,711, custodian fee – EUR 324, other management expenses - EUR 163.

#### IF "CBL Opportunities Funds" Sub-fund "CBL Optimal Opportunities Fund – USD" Semiannual Report 2021 (EUR)

The Fund Manager will closely follow global market developments. In order to adjust the structure of the Fund with regard to the assessment of the current and expected situation, changes will be made mainly in the share of investments in equity funds.
